

Plumbing Services: Tankless Water Heater

Many New Jersey homeowners overlook or ignore their water heater. Some aren't quite sure what the difference in models does. Additionally, some people aren't even aware they're recommended to clean their water heater twice a year.

Ignoring issues that may seem minor can cause easy repairs to turn into catastrophic messes or cost thousands more per year than necessary.

To avoid all of this stress, New Jersey residents know they can rely on Harris, the most trusted tankless water heater service provider in the area. At Harris Plumbing, Heating, Air & Electrical, our trained experts are always ready and available to advise you through a more proactive approach to the maintenance of your home.

What is a Tankless Water Heater?

To heat the water in your home, you generally have two options. A tank water heater preheats water in a large tank before hot water is needed. However, the more modern [tankless water heater is smaller](#) and heats water on an as-needed basis.

A tankless water heater is a fraction of the size of those large, clunky water containers you may have grown up seeing. It works by immediately heating water as you need it, which means you'll [avoid needless energy waste](#) and save money. It is also easier to set up and maintain than a water storage tank.

Traditional water tanks are likely to contain bacteria after sitting for so long. If left ignored, the sediment and grime are likely to spread out through plumbing pipes for years. Internal build-up can mean costly repairs requiring torn-up walls. It also costs money to maintain the water's temperature, even when you aren't in need of heated water.

You can avoid all of these problems by installing a tankless water heater.

Tankless Water Heater Services

Like all good things, a tankless water heater requires occasional maintenance. At Harris Plumbing, Heating, Air & Electrical, our expert technicians provide the best water heater services in New Jersey.

Tankless Water Heater Installation

If your water tank is getting old, it may be [ripe with bacteria](#). The most telling sign that action is needed is a subtly worsening odor in your water or shower. The risk of showering in bacteria alone is enough to convince most homeowners to get their annual maintenance done.

For the more frugal-minded, it's important to note the cost-efficiency of switching to a new tankless heater. A faulty or old system needing to be replaced may seem more expensive than it's worth, especially if your water seems to be running fine. However, when compared to the costs of disinfecting pipes that the old system has clogged, regular maintenance is the cheaper option by far.

If you want to protect the health of your family from outdated home design or have more money at the end of every month, installing a tankless water heater is a change that pays for itself.

Tankless Water Heater Repair

If your water temperature starts getting unpredictable, there may be a build-up of sediment or an issue with the thermostat. The former is resolved by proper, professional cleaning, and the latter is fixed with a replacement. It is also possible for outlet or inlet pipes to loosen over time, causing leaks and wasted water.

For the average homeowner in New Jersey, the easiest and most cost-efficient way of fixing a water heater is to call Harris. While attempting to handle your problem yourself is an option, you may cause thousands of dollars in plumbing damages to not even fix anything.

Tankless Water Heater Maintenance

One of the most offensive issues that can come with a lack of care for a water heater is a build-up of green or white crust along shower walls and faucets, that gets harder to scrub off as it sits. This is professionally called a limescale or scale deposit and may cause your water to smell. Limescale problems are easy to control with an annual cleaning of your water heater.

At Harris, our technicians are trained to execute proper maintenance of tankless water heaters. We help you avoid future issues by cleaning out rust and sediment from the tank, replacing a thermostat, and tightening pipes. Our experts at Harris are the best suited and most locally trusted to address your water heater maintenance.

Conclusion

If you have concerns about the state of your water heater, want to schedule a maintenance appointment, or want to inquire about more energy-efficient options for your home, the technicians at Harris are the best for the job.
